NOVONIX

Set for Growth

Investor Presentation, February 2024

Baird 2024 Vehicle Technology & Mobility Conference

Important Notice and Disclaimers

The information contained in this presentation (the "**Presentation**") has been prepared by NOVONIX Limited (ACN 157 690 830) ("**the Company**" or "**NOVONIX**") solely for information purposes and the Company is solely responsible for the contents of this Presentation. It is intended to be a summary of certain information relating to the Company as at the date of the Presentation and does not purport to be a complete description of NOVONIX or contain all the information necessary to make an investment decision. Accordingly, this Presentation is not intended to, and should not, form the basis for any investment, divestment or other financial decision with respect to the Company. Any reproduction or distribution of the Presentation, in whole or in part, or the disclosure of its contents, without prior consent of the Company, is prohibited.

Not an Offer

This Presentation does not constitute, nor does it form part of an offer to sell or purchase, or the solicitation of an offer to sell or purchase, any securities of the Company. This Presentation may not be used in connection with any offer or solicitation by anyone in any jurisdiction in which such offer or solicitation is not permitted by law or in which the person making the offer or solicitation is not qualified to do so or to any person to whom it is unlawful to make such offer or solicitation. Any offering of securities will be made only by means of a registration statement (including a prospectus) filed with the U.S. Securities and Exchange Commission (the "**SEC**"), after such registration statement becomes effective, or pursuant to an exemption from, or in a transaction not subject to, the registration requirements under the U.S. Securities Act of 1933, as amended. No such registration statement has become effective, as of the date of this Presentation.

Forward-Looking Statements

This Presentation contains forward-looking statements about the Company and the industry in which it operates. Forward-looking statements can generally be identified by use of words such as "anticipate," "believe," "contemplate," "continue," "could," "estimate," "expect," "intend," "may," "plan," "potential," "predict," "project," "should," "target," "will," or "would," or other similar expressions. Examples of forward-looking statements in this presentation include, among others, statements we make regarding the performance of our Generation 3 Furnaces and their ability to meet customer specifications, and cost, throughput and sustainability targets, our increased production target and timing of commercial production of our Riverside facility, our ability to achieve profitability and sales price targets, the efforts and potential benefits of our working with the U.S. Department of Energy, and the timing of our future site expansions. We have based such statements on our current expectations and projections about future events and trends that we believe may affect our financial condition, results of operations, business strategy and financial needs. Such forward-looking statements involve and are subject to known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company and/or its subsidiaries to be materially different from any future results, performance or achievements expressed or implied by the forward-looking information. Such factors include, among others, the success of the technology results in industrial format lithium-ion cells, our ability to scale to other technologies, how discussions progress with potential customers, and the accuracy of our estimates regarding market size, expenses, future revenue, capital requirements and needs for additional financing, and regulatory developments in the United States, Australia and other jurisdictions. Detailed information regarding these and other factors that could affect our business and results is included in our filings, including the Company's most recent transition and annual reports on Form 20-F, particularly the "Operating and Financial Review and Prospects" and "Risk Factors" sections of those reports. Copies of these filings may be obtained by visiting our Investor Relations website at www.novonixgroup.com or the SEC's website at www.sec.gov. Forward-looking statements are not guarantees of future performance or outcomes, and actual performance and outcomes may differ materially from those made in or suggested by the forward-looking statements contained in this Presentation. Accordingly, recipients of this Presentation should not place undue reliance on forward-looking statements. Any forward-looking statement in this Presentation is based only on information currently available to us and speaks only as of the date on which it is made. We undertake no obligation to update any forward-looking statement, whether written or oral, that may be made from time to time, whether as a result of new information, future developments or otherwise.

Industry and Market Data

This Presentation contains estimates and information concerning our industry and our business, including estimated market size and projected growth rates of the markets for our products. Unless otherwise expressly stated, we obtained this industry, business, market, and other information from reports, research surveys, studies and similar data prepared by third parties, industry, and general publications, government data and similar sources. This Presentation also includes certain information and data that is derived from internal research. While we believe that our internal research is reliable, such research has not been verified by any third party.

Estimates and information concerning our industry and our business involve a number of assumptions and limitations. Although we are responsible for all of the disclosure contained in this Presentation and we believe the third-party market position, market opportunity and market size data included in this Presentation are reliable, we have not independently verified the accuracy or completeness of this third-party data. Information that is based on projections, assumptions and estimates of our future performance and the future performance of the industry in which we operate is necessarily subject to a high degree of uncertainty and risk due to a variety of factors, which could cause results to differ materially from those expressed in these publications and reports.

Trademarks, Service Marks and Trade Names

Throughout this Presentation, there are references to various trademarks, service marks and trade names that are used in the Company's business. "NOVONIX," the NOVONIX logo and other trademarks or service marks of NOVONIX appearing in this Presentation are the property of NOVONIX or its subsidiaries. Solely for convenience, the trademarks, service marks and trade names referred to in this Presentation are listed without the ® or ™ symbol, as applicable, but such references should not be construed as any indicator that their respective owners will not assert, to the fullest extent under applicable law, their right thereto. All other trademarks, trade names and service marks appearing in this Presentation are the property of their respective owners.

Providing Revolutionary Solutions to the Battery Industry

Investment Highlights

- Leading U.S. based battery materials and technology Company with lower carbon footprint
- Large and growing market for battery materials supported by localization efforts
- Intellectual property portfolio for synthetic graphite manufacturing and all-dry, zero-waste NMC cathode synthesis
- Battery Technology Solutions provides competitive advantage to accelerate innovation
- Customer and government financing support paving a path to profitability as a sector leader

NOVONIX

Riverside Facility in Tennessee

Competitive Advantage Through Synergistic Operating Structure

NOVONIX ANODE MATERIALS

- Leading domestic supplier of battery-grade synthetic graphite
- Large scale and sustainable production to advance North American battery supply chain
- Strategically positioned to accelerate clean energy transition through proprietary technology, advanced R&D and partnerships

NOVONIX BATTERY TECHNOLOGY SOLUTIONS

- Develops industry leading lithium-ion battery testing equipment while providing R&D services
- In-house testing technology & data solutions accelerates rapid advancements compared to industry standard
- Data solutions leverages AI and machine learning algorithms to predict cell performance and reliability more quickly and accurately

NOVONIX CATHODE MATERIALS

- Commercializing proprietary all-dry, zero-waste cathode synthesis technology
- Process technology minimizes environmental impact while producing high performance materials
- Pilot line producing samples with large-scale production of up to 10 tpa

NOVONIX Proprietary Process Technologies Leads the Clean Energy Transformation

NOVONIX ESG Commitment

Environmental

Our mission is to develop innovative, sustainable technologies and high-performance materials to service the electric vehicle and energy storage industries

Social

The health, safety, and wellbeing of our employees and the communities we operate in are essential to NOVONIX's success and growth

Governance

NOVONIX believes corporate governance is central to its business objectives and a critical element contributing to the preservation of shareholder value

Environmental Benefits of NOVONIX Technology

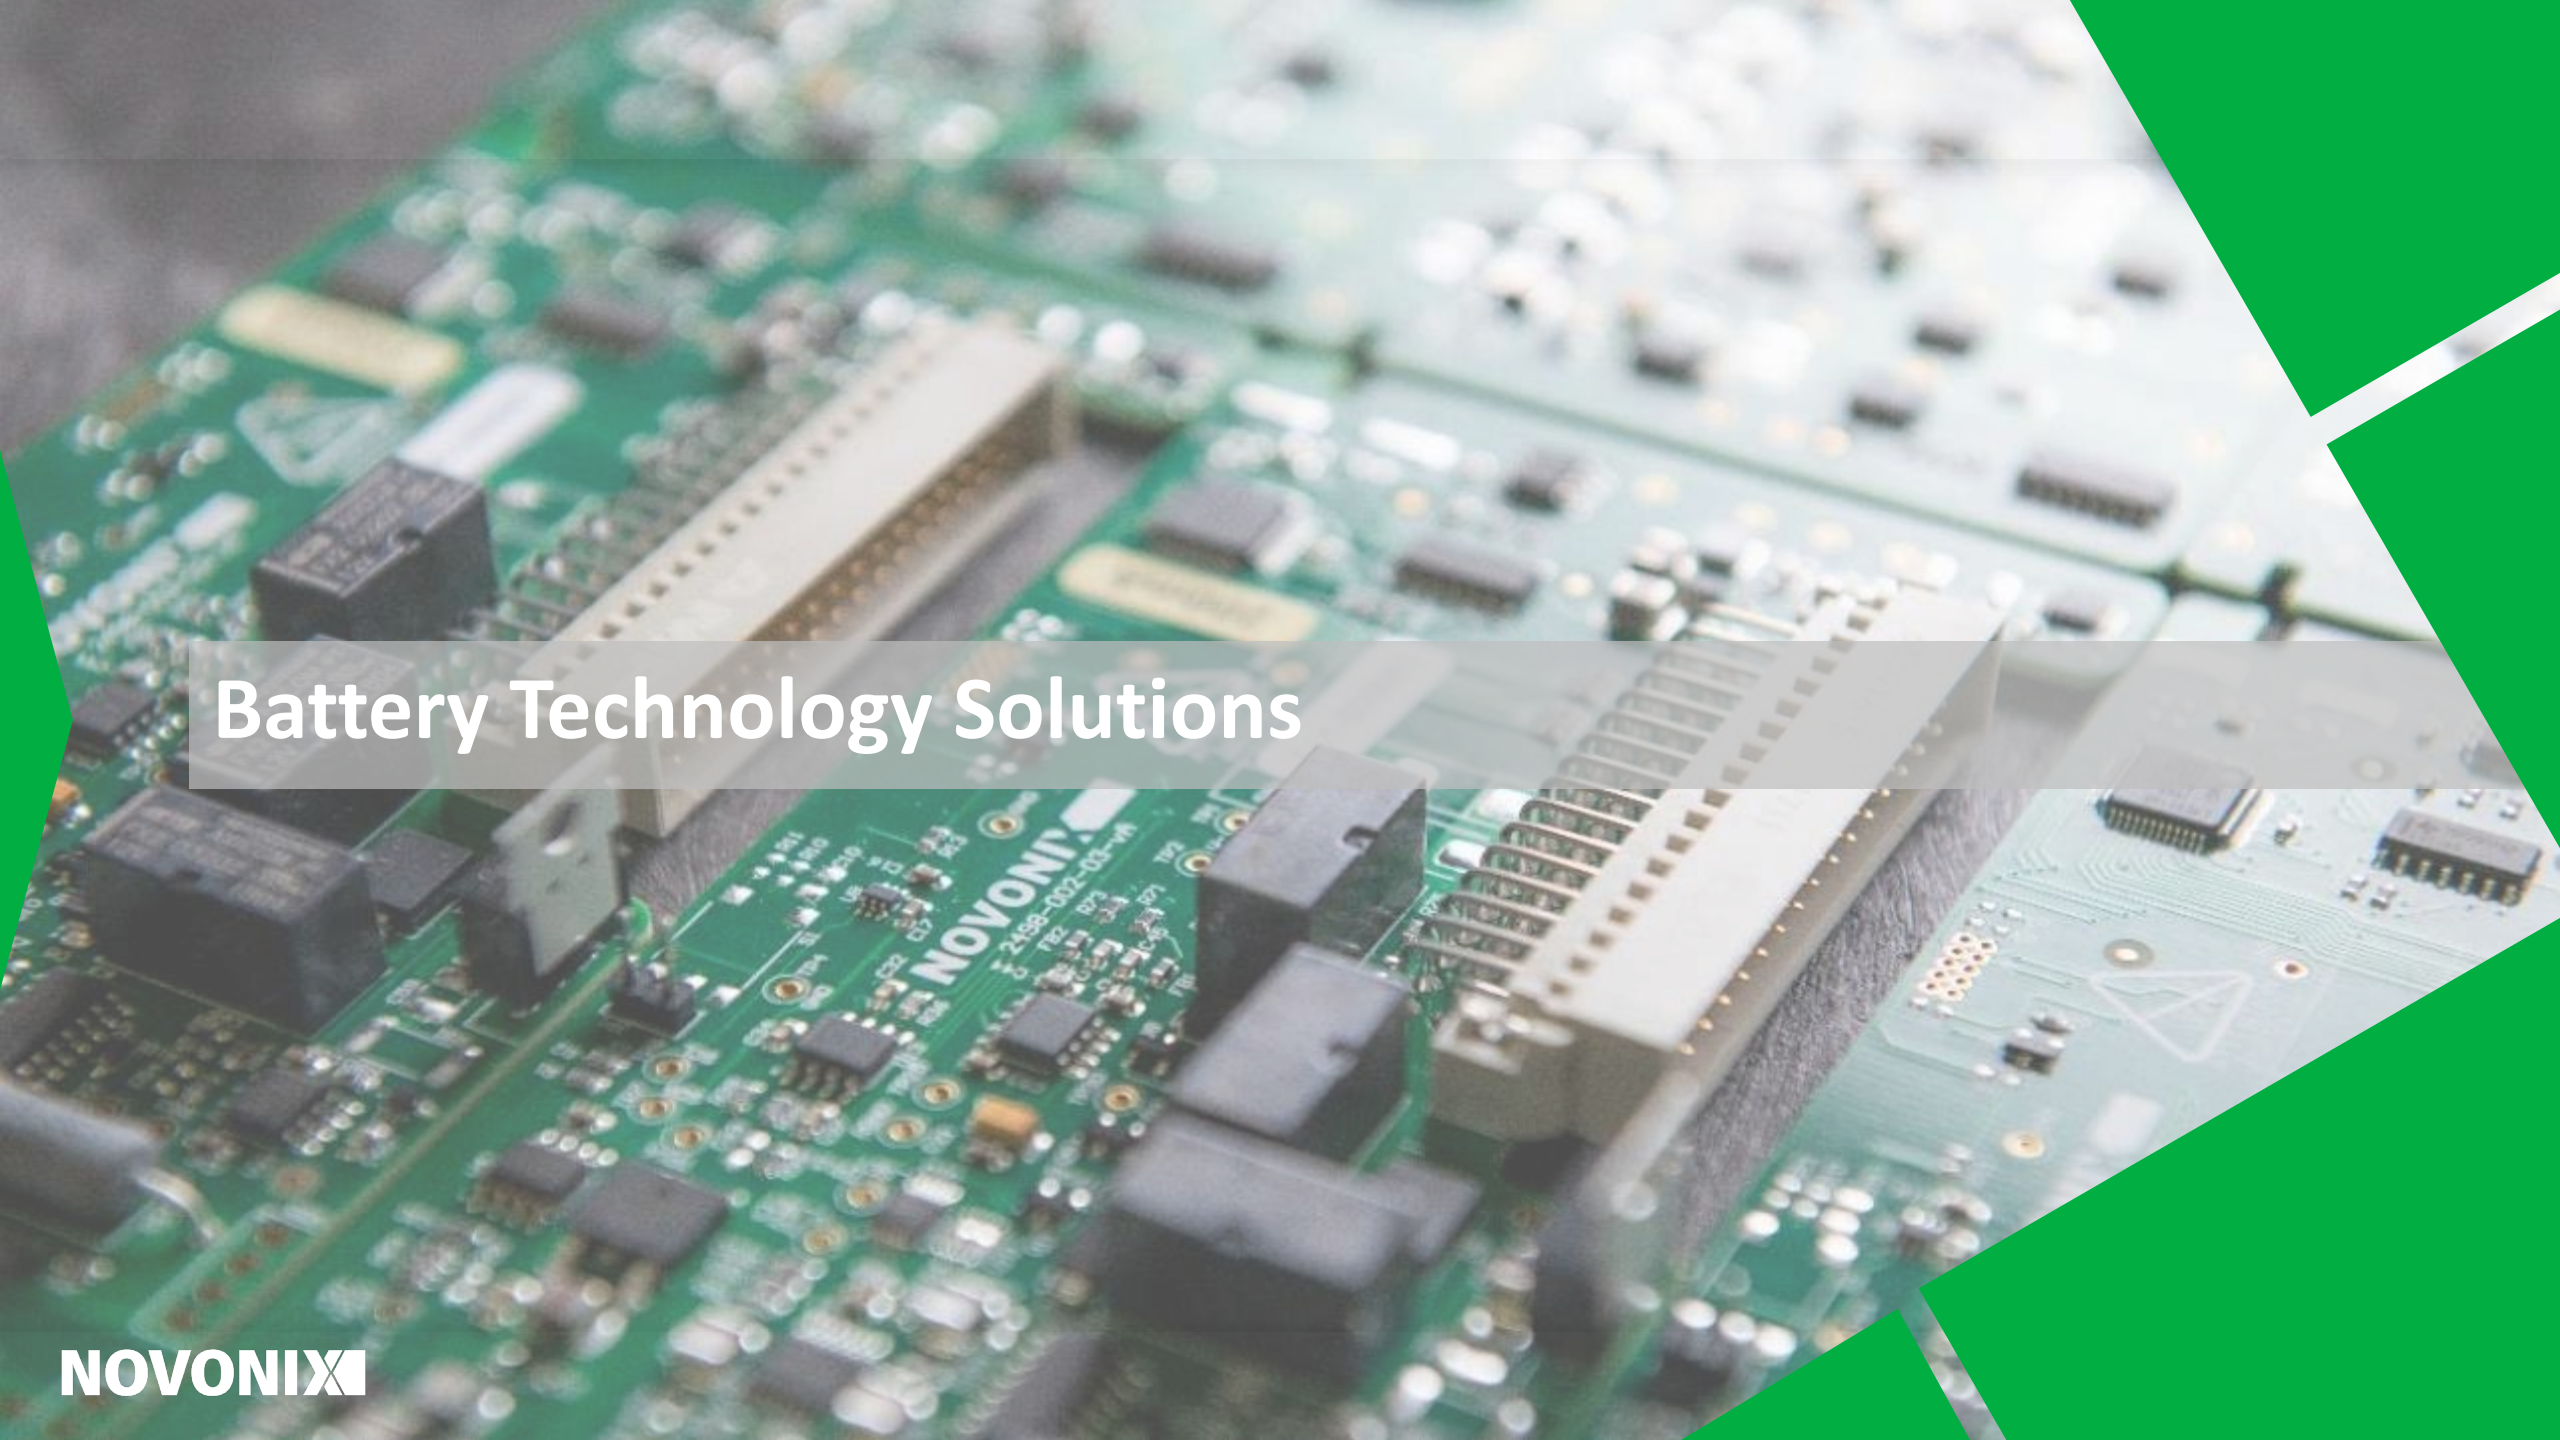
	Anode Technology	Cathode Technology
Inputs	▪ Clean power sources[1] ▪ High purity input materials	▪ Reduced power requirements ▪ No reagents
Process	▪ Proprietary furnace & process technology ▪ Increased energy efficiency ▪ No chemical purification	▪ Proprietary all-dry, zero-waste cathode synthesis technology ▪ Simplified processing requirements and flowsheet
Outputs	▪ Support higher-performance lithium-ion batteries resulting in longer life ▪ Negligible facility emissions ▪ LCA[2] demonstrated a ~60% decrease in global warming potential	▪ No sodium sulfate waste ▪ Eliminates process waste-water ▪ Negligible facility emissions

1 - Tennessee Valley Authority, 2022 Sustainability Report notes 52% of power is from carbon-free sources.

2 - The Life Cycle Assessment (LCA) conducted by Minviro Ltd. demonstrated a ~60% decrease in global warming potential (GWP) relative to conventional anode grade synthetic graphite versus Chinese product.

2024 Focus Items - Set For Growth

Maintain Industry Leading R&D Efforts for Battery Materials	▪ Enhance BTS offerings for additional revenue and services ▪ Test high nickel cathode materials from all-dry, zero-waste process in full cell performance ▪ Advance artificial intelligence/machine learning models, products and services
Scale Operations – On Track to Deliver Commercial Production	▪ Complete Riverside engineering to optimize facility and maximize capacity ▪ Installation of equipment to reach 3K tpa by year-end to support customer timelines ▪ Leverage Riverside engineering to progress Greenfield facility plans
Secure Tier 1 Customers	▪ Pursue supply agreements with Tier 1 OEMs and cell manufacturers ▪ Allocate remaining Riverside capacity through off-take agreements ▪ Continue to allocate Greenfield facility capacity through customer agreements
Secure Financing to Scale Operations	▪ Invest in Riverside with receipt of DOE MESC grant funds ▪ Progress DOE LPO loan application for Greenfield facility ▪ Attract strategic investment aligned with capacity ramp



Battery Technology Solutions

NOVONIX

NOVONIX is at the Forefront of Battery Technology

UHPC Hardware

Enables quick reliable predictions of battery lifetime

UHPC

R&D Services

Materials Development and Characterization

Analytical materials lab

Cell Design and Prototyping

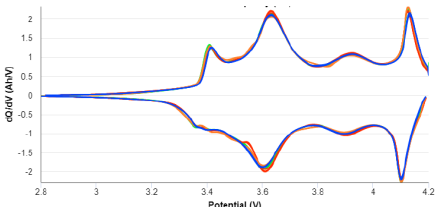
Pouch and cylindrical cell manufacturing pilot line

Cell Testing

Diagnostic tools and performance testing

Data Solutions

Customer Research & Development Services



Battery technology insights driven by AI & advanced data analytics with SandBoxAQ

NOVONIX Battery Technology Solutions (BTS) provides cutting edge technology that is highly sought after for R&D services to create the next generation battery — potentially accelerating R&D from years to weeks with proprietary technology

Cathode Materials

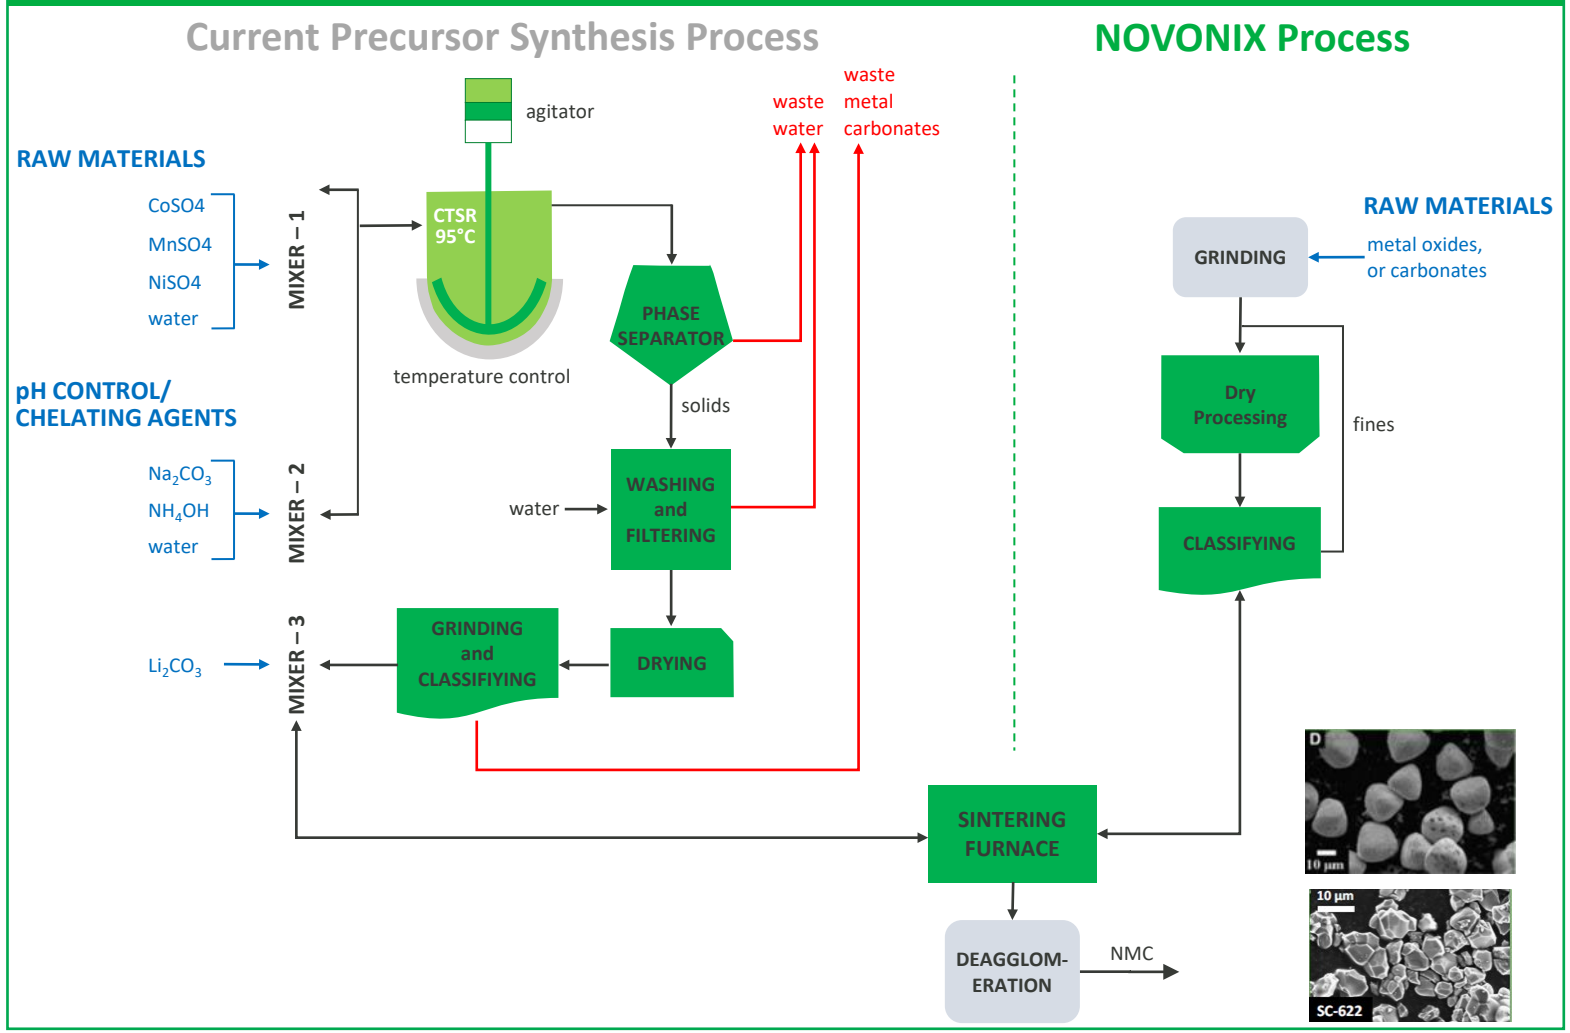
NOVONIX

NOVONIX - Cathode Synthesis Provides Clean and Simple Process

Opportunity Overview

- Cathode material represents about 30% of the cost of a battery cell
- In 2021 the global cathode market size value was US$19B, with a forecasted revenue of US$100B by 2030[1]
- Current synthesis process is complex, produces water waste and is costly
- Each tonne of cathode powder generates 15,000 liters of water waste[2] and 1.6 tonnes of sodium sulphate waste[1]
- With multiple patent applications filed, cathode synthesis technology provides high nickel cathode materials with:
  - Higher yields at lower costs
  - No water waste
  - Flexible input materials

Current Process vs. NOVONIX Process



1. Benchmark Minerals, various Equity Research reports including Bernstein and JP Morgan and NOVONIX estimates
2. J.Power Sources: S. Ahmed, P.A. Nelson, K.G. Gallagher, N. Susarla, D.W. Dees. Cost and energy demand of producing nickel manganese cobalt cathode material for lithium ion batteries

Cathode Synthesis: Engineering Scoping Study Results

NOVONIX engaged Hatch to provide a 'Process Comparison Study' by contrasting the **NOVONIX All-Dry, Zero-Waste Cathode Synthesis Process** against conventional cathode synthesis for comparative costs and environmental details

Hatch Study Estimated Findings [FEL-1]

Capital Intensity Lowered by ~30 %	▪ Fewer unit operations leads to simplified flowsheet ▪ Higher mass feed rate due to 'hydroxide-free' feedstock

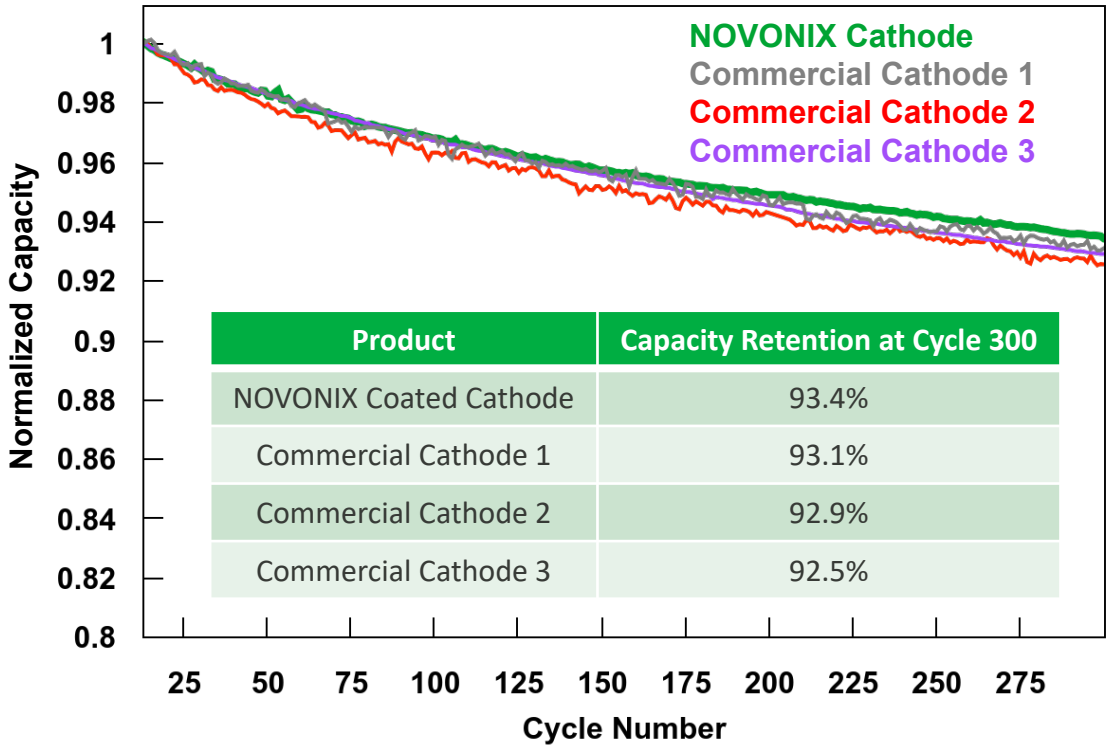
Operational Process Expenses Lowered by ~50%	▪ Fewer unit operations leads to lower labour costs
	▪ Low-to-no processing reagents
	▪ Lower power consumption
	  ▪ More efficient calcination
	  ▪ Fewer processing steps
	▪ Lower maintenance costs
	▪ Lower waste treatment costs

More Environmentally Friendly process	▪ ~27% lower power consumption & CO2 intensity ▪ ~65% less water usage ▪ Eliminates production of sodium sulphate biproduct ▪ No ammonia required removing a significant safety risk

Note: Please see Hatch disclaimer shown in Sept 12, 2023 press release on Study description and estimates.

NMC622 Cathode Cycling Performance Competitive with Commercial Materials

Full-Cell Cycling Performance of NOVONIX Single-Crystal NMC622

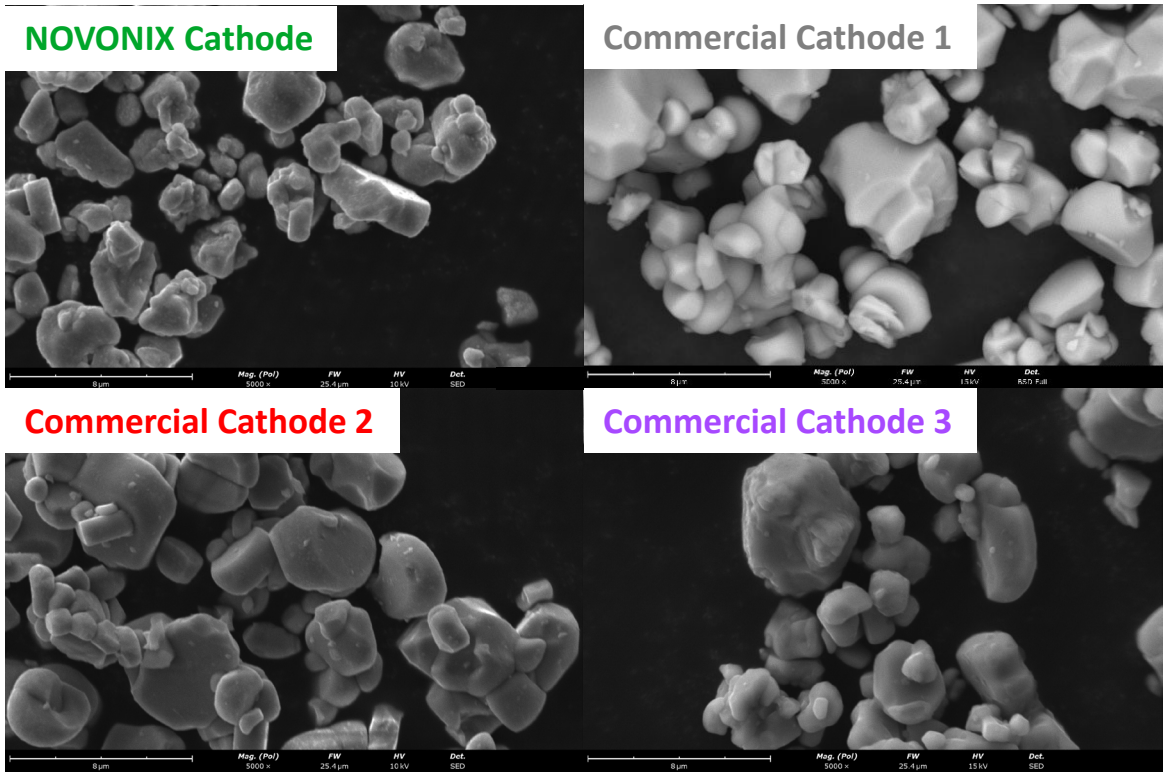


Product	Capacity Retention at Cycle 300
NOVONIX Coated Cathode	93.4%
Commercial Cathode 1	93.1%
Commercial Cathode 2	92.9%
Commercial Cathode 3	92.5%

40°C; 2.8-4.3V; 1.2M $LiPF_6$ EC:EMC:DMC(25:5:70)+3VC; [Charge] : CC-0.33C; [Discharge] : CC-0.33C

SEM Images of Single-Crystal NMC622

- Normalized electrochemical results in 1Ah pouch cell show that surface-coated NOVONIX NMC622 has comparable electrochemical performance to commercial NMC materials



Anode Materials

NOVONIX

NOVONIX is Localizing the Synthetic Graphite Supply Chain

NOVONIX Anode Material Progress & Advantages

Domestic Supply
Producing high-performance synthetic graphite materials sustainably for local supply of Tier 1 battery and OEM customers

High Performance
Our products are developed to meet or exceed Tier 1 EV OEMs specifications

Cleaner, More Efficient Technology
Produced with cleaner energy sources with virtually zero emissions and uses no harmful chemicals

Strategic Relationships
Leveraging close collaboration with partners and customers to bring our anode materials to market

Key Strategic Relationships & Highlights

LG Energy Solution
- Signed a Joint Research and Development Agreement (JDA) with LGES in June 2023
  - Upon completion of JDA, LGES has the option to purchase up to 50,000 tonnes of artificial graphite anode material over a 10-year period
  - LGES invested $30M in convertible notes

Panasonic ENERGY
- Supply Agreement with Panasonic Energy for 10,000 tonnes between 2025 -28 and incorporates price adjustments for raw materials, subject to meeting certain milestones

KORE
- Supply Agreement with KORE Power scaling to ~12,000 tpa of anode material

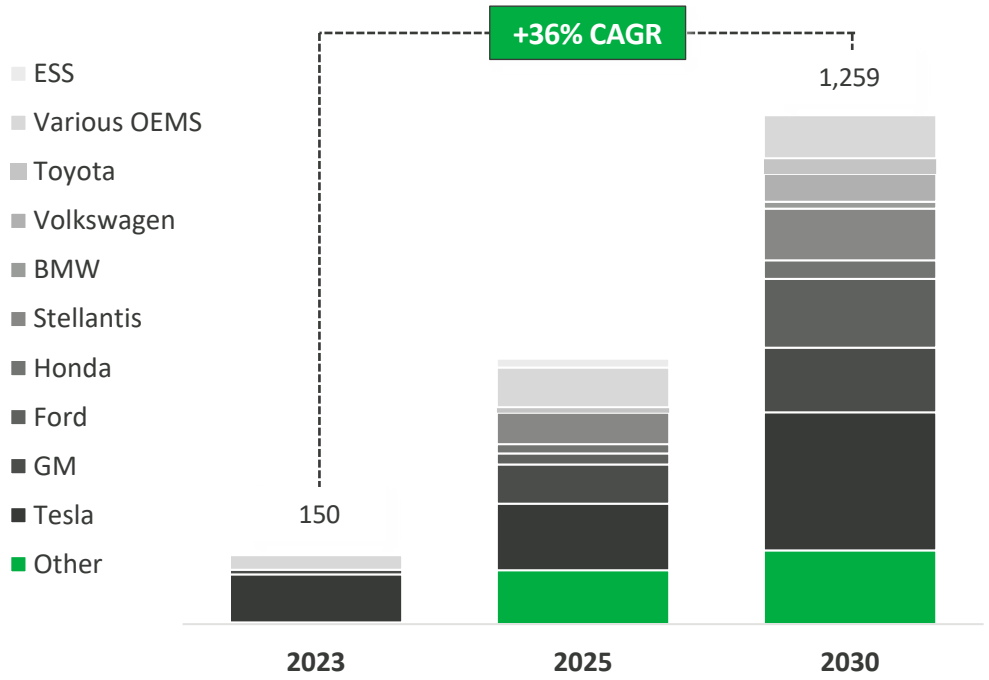
SAMSUNG SAMSUNG SDI
- MOU agreement with Samsung SDI for evaluation of NOVONIX materials

PHILLIPS 66
- In August 2021, Phillips 66 made a $150 million strategic investment to become NOVONIX's largest shareholder and engaged PSX in technology development agreement

Harper International
- Partnership with Harper International, a domestic specialized furnace technology leader, developing and supplying NOVONIX with proprietary systems for thermal processing

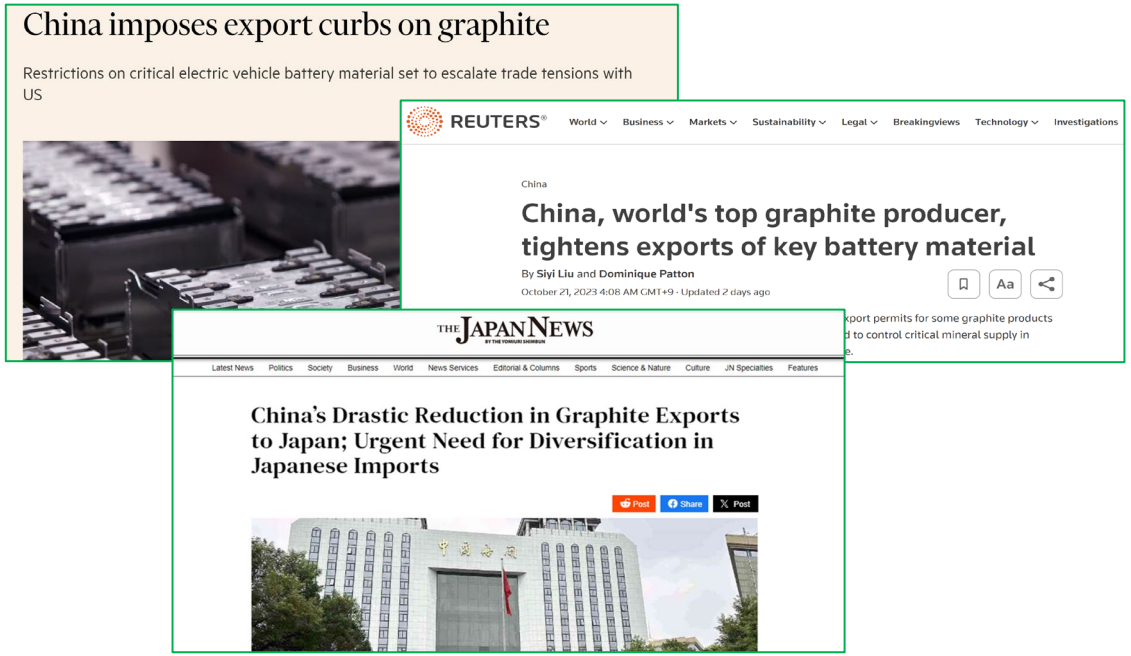
Strong EV Growth Building Pressure for a Localized Supply Chain

Battery Demand Remains Robust (GWh)



- Market is estimating ~20% North American growth in 2024. Some OEMs have slowed plans, but new entrants have increased overall demand
- Government incentives are supporting the projected ~ 50% adoption rate in electric vehicle by 2030
- Forecasted EV demand showing double digit growth through 2030

Global Trade Policies Support Localization of US Supply Chain

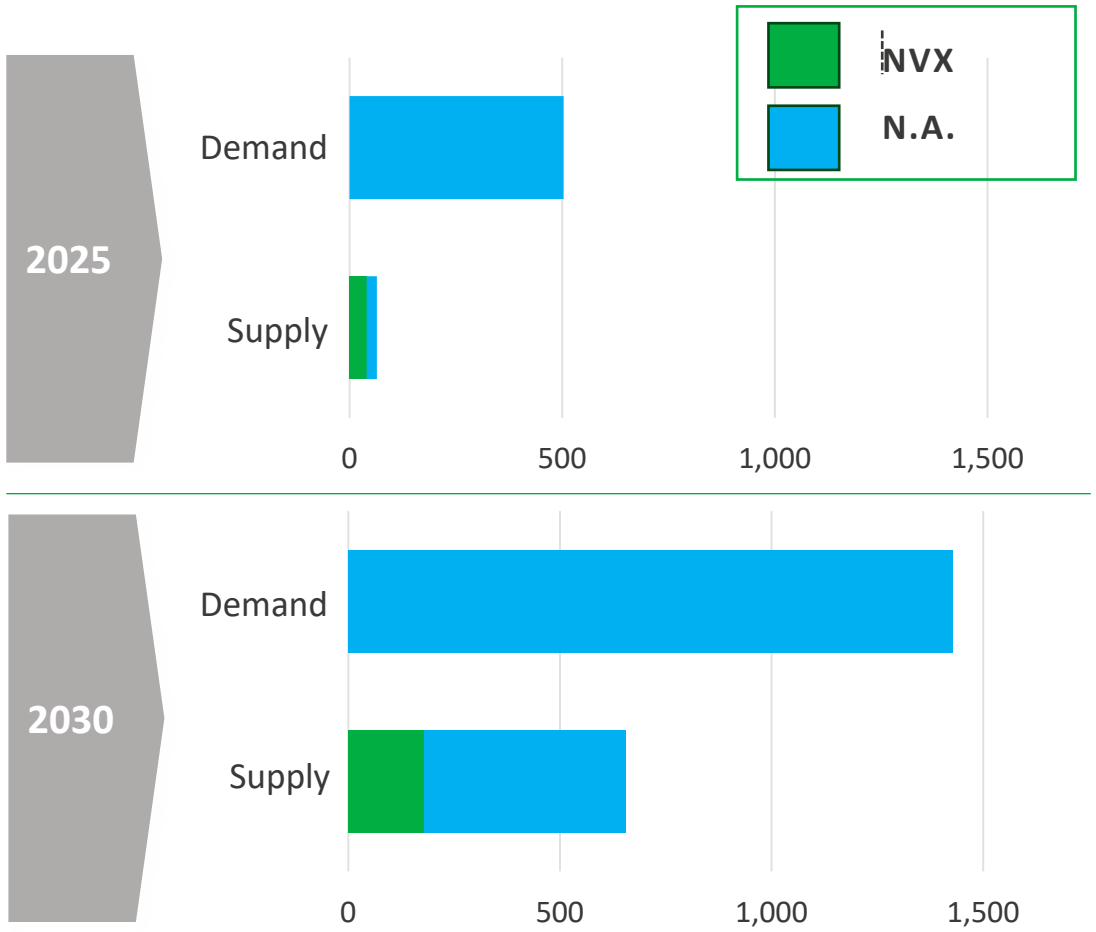


- Strong U.S. reliance on Chinese graphite and battery materials presents challenges for IRA compliance
- China announced export controls for battery graphite. Recent trade statistics reported from Japan News showed China is limiting exports to Japan and United States
- U.S. IRC provide the advanced manufacturing production tax credit Section 45X and the revival of the qualifying advanced energy investment credit under Section 48C

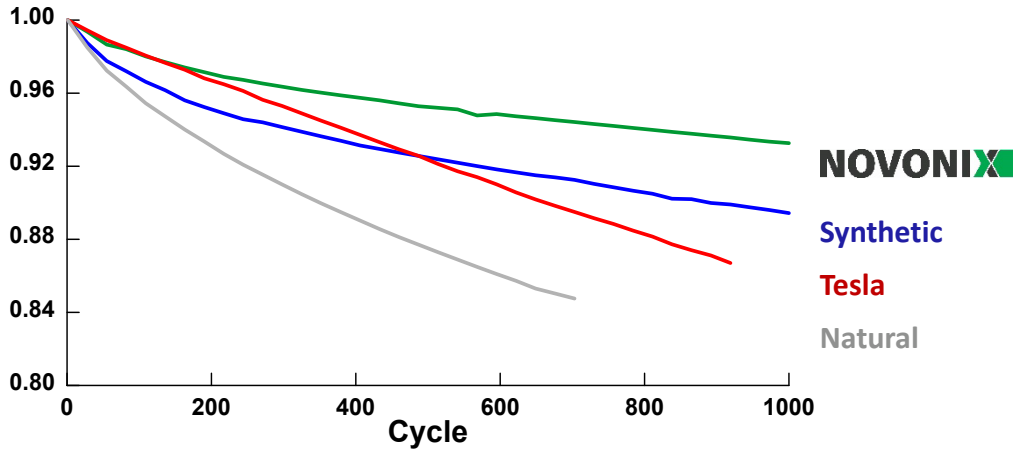
Source: Benchmark Minerals Intelligence (December '23), Bernstein, Company Reports

NOVONIX High Performance Anode Material Helping to Address to N.A. Shortfall

North American Graphite Shortfall, Ex-China (Thousand tpa)



NOVONIX Anode Material Outperforms in Head-to-Head Testing



- NOVONIX offers improved capacity retention compared to industry leading materials (including a Tesla Model S cell used as a reference benchmark) as expected from higher coulombic efficiency
- Better capacity retention means less range loss over time for an electric vehicle

Riverside Facility Begins Production in 2024

Riverside Facility Overview

- In 2021 celebrated opening of NOVONIX's new Riverside facility attended by US Secretary of Energy, Jennifer Granholm
- NOVONIX has been running Generation 3 Furnaces campaigns through 2023 to better understand furnace performance and provide customer samples
- Supply Agreement with KORE Power to begin deliveries in late 2024 scaling to 12,000 tpa for their KOREplex Facility
- NOVONIX Anode Materials division was awarded one of the initial grants from the U.S. Department of Energy for US$100 million

Riverside Facility in Chattanooga, Tennessee

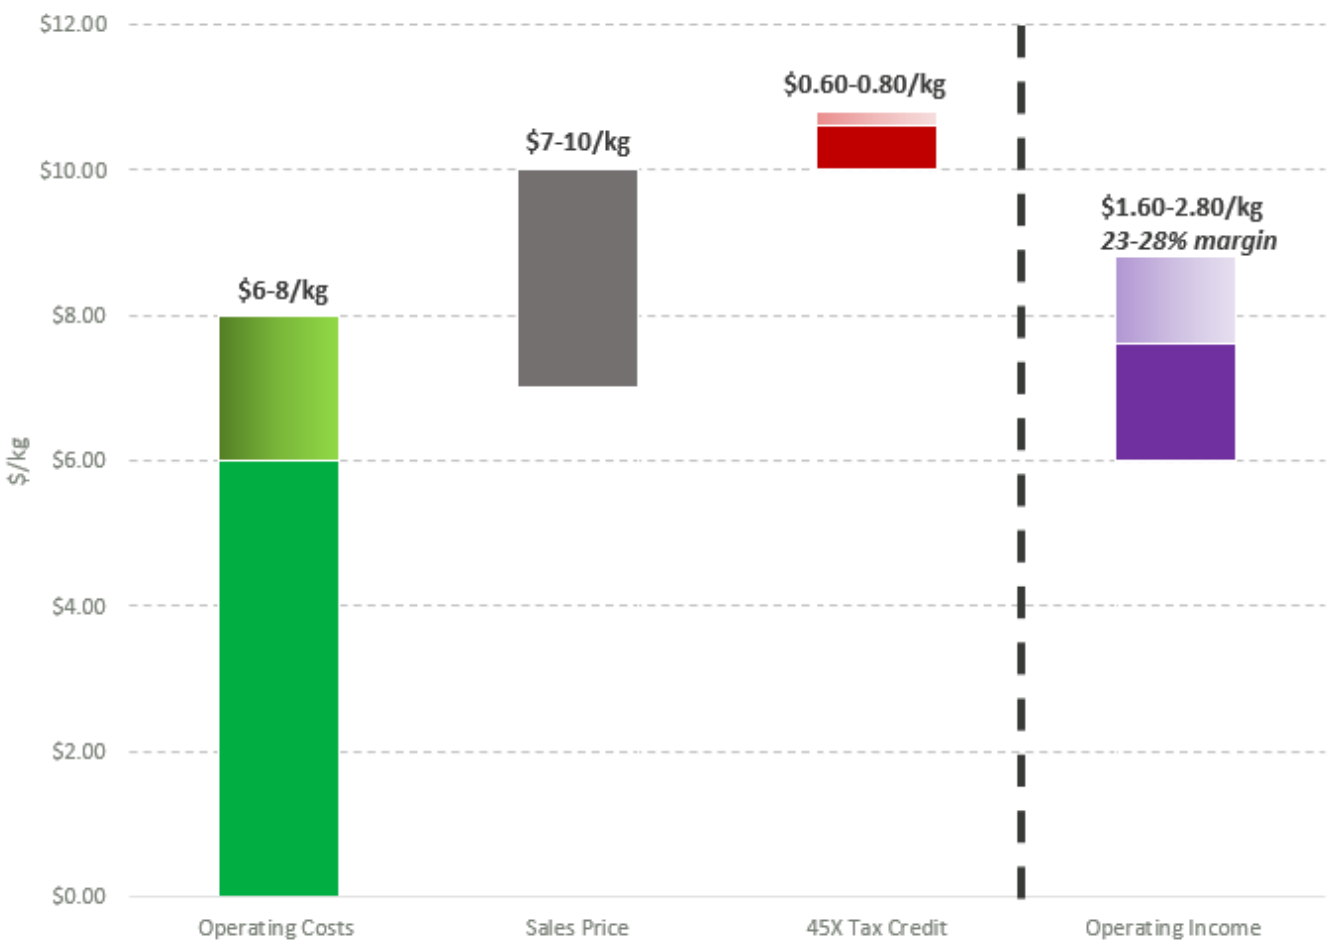
Riverside Update & Next Steps

- Demonstrated successful production with the Company's Generation 3 Furnaces meeting design targets, including throughput, cost, and sustainability targets
- Increased production capacity target from 10,000 tpa to up to 20,000 tpa for Tennessee Facility
- Expected capital and operating costs for future facilities projected to be lower than the Company's initial estimates
- Progressed engineering to support ordering of mass production equipment for Riverside buildout and supports potential future expansions

NOVONIX Generation 3 Continuous Induction Furnace Systems

NOVONIX has Demonstrated a Pathway to Profitable Production in the U.S.

Riverside Facility Unit Economics Overview



Highlights

- Pricing to range dependent on
  - Product specification
  - Localization premium
  - Government programs
    - Section 301 Tariffs
    - IRA 30D Compliance, 45X, 48C
- Recent production campaigns validate furnace throughput and demonstrate improved unit economics for Riverside
- Unit economics expected to improve with increased scale of facility

Panasonic Energy and NOVONIX Sign a Binding Off-take Agreement

Panasonic Energy Kansas Facility Rendering

Panasonic Energy

NOVONIX

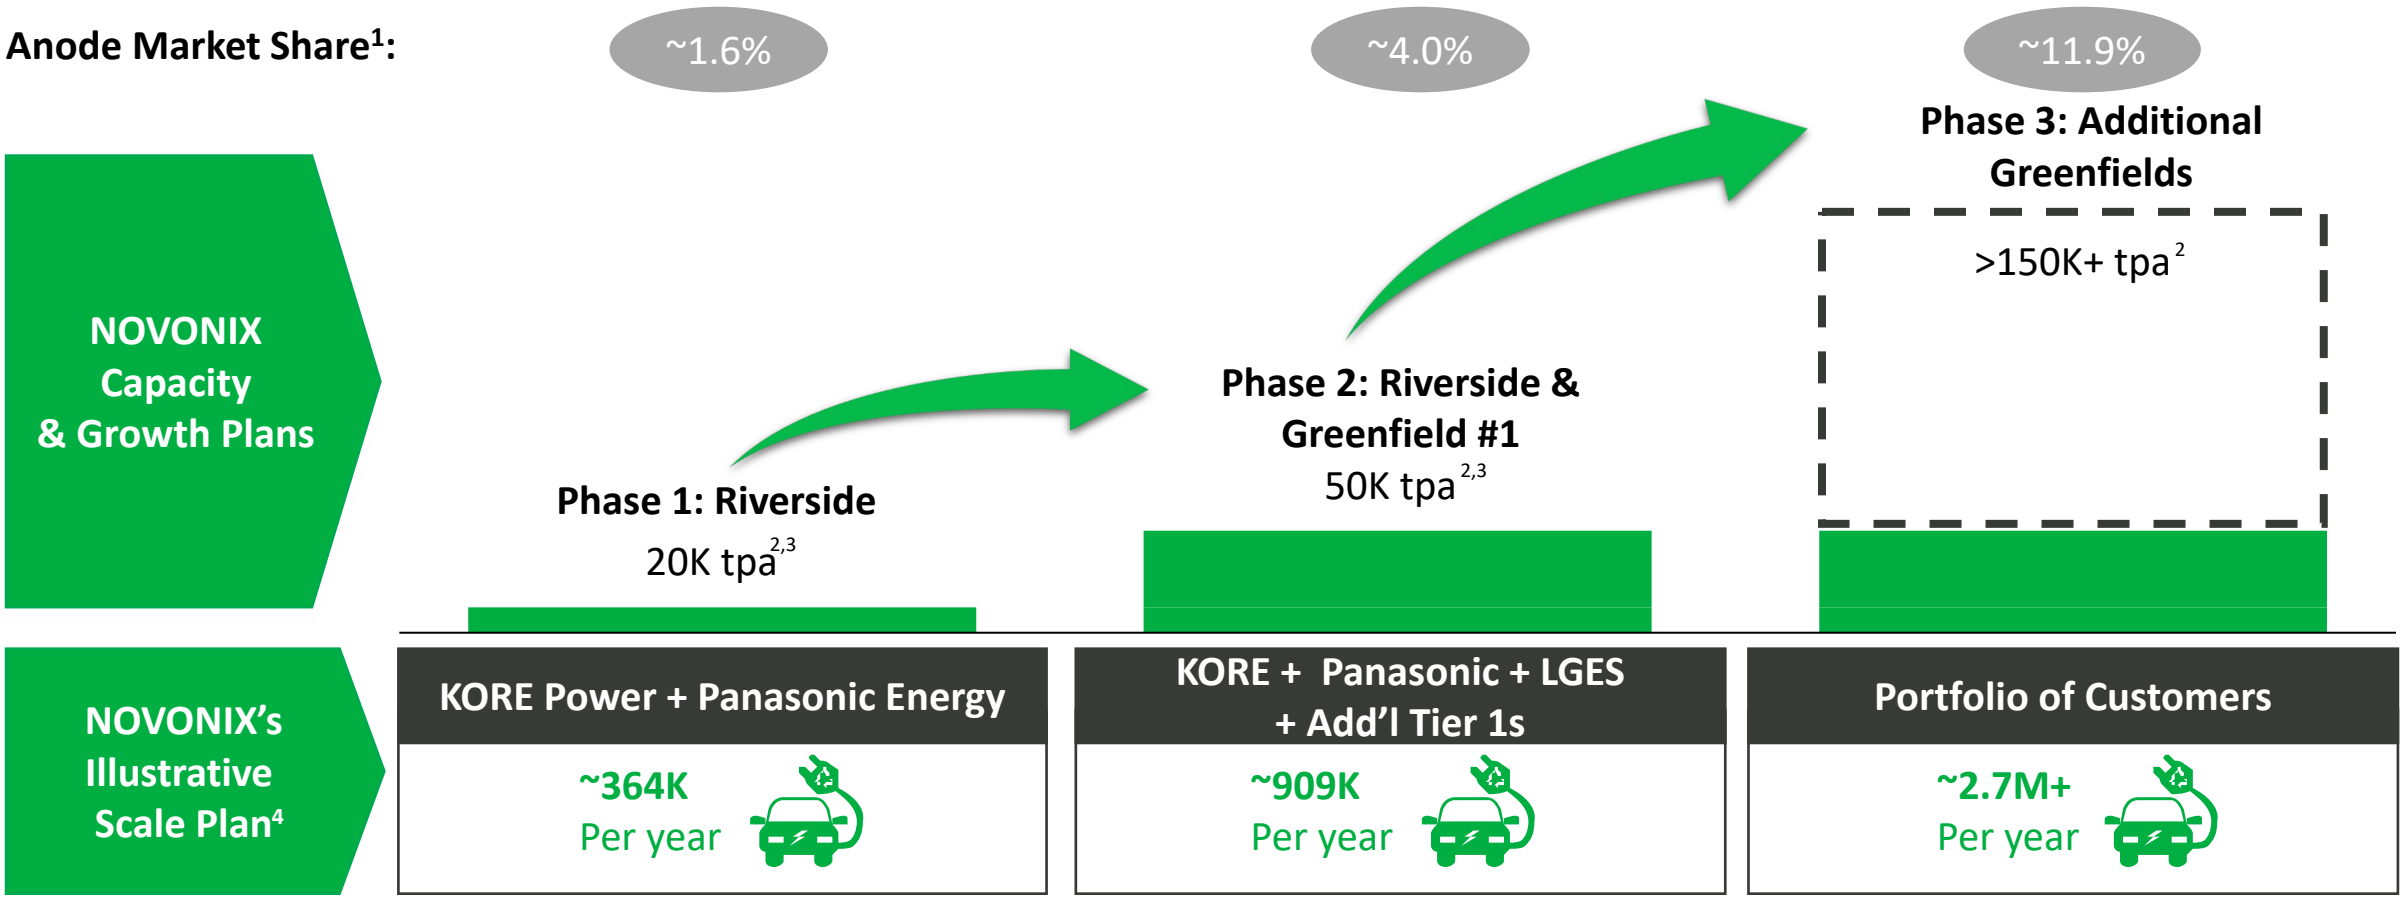
Panasonic Energy

- Panasonic Energy is a leading developer of battery cell technology for EV and ESS batteries in the U.S.
- Panasonic Energy has developed relationships with Tesla, Honda, Toyota, Mazda, Subaru, Ford, and Lucid in North America to supply EV batteries
- Panasonic Energy plans to have ~200 GWh of gigafactories in North America
- NOVONIX and Panasonic Energy began working on product sampling and testing after signing MOU with subsidiary Sanyo Electric in 2019

Highlights of Agreement

- NOVONIX and Panasonic Energy sign binding off-take agreement for high-performance synthetic graphite material to be supplied from NOVONIX's Riverside facility in Tennessee to support Panasonic Energy's North American operations
- Commencing in 2025, the agreement supports the purchase of 10,000 tonnes of synthetic graphite over 4 years and is subject to agreed upon milestones regarding final mass production qualification and timelines
- The agreement includes a pricing structure that incorporates a mechanism for price adjustments in response to significant changes in NOVONIX's raw material costs
- Inflation Reduction Act, section 45X benefits both companies in building local supply chain:
  - NOVONIX – Advanced Manufacturing of Critical Minerals and Battery Material
  - Panasonic Energy – Local manufacturing of battery cells

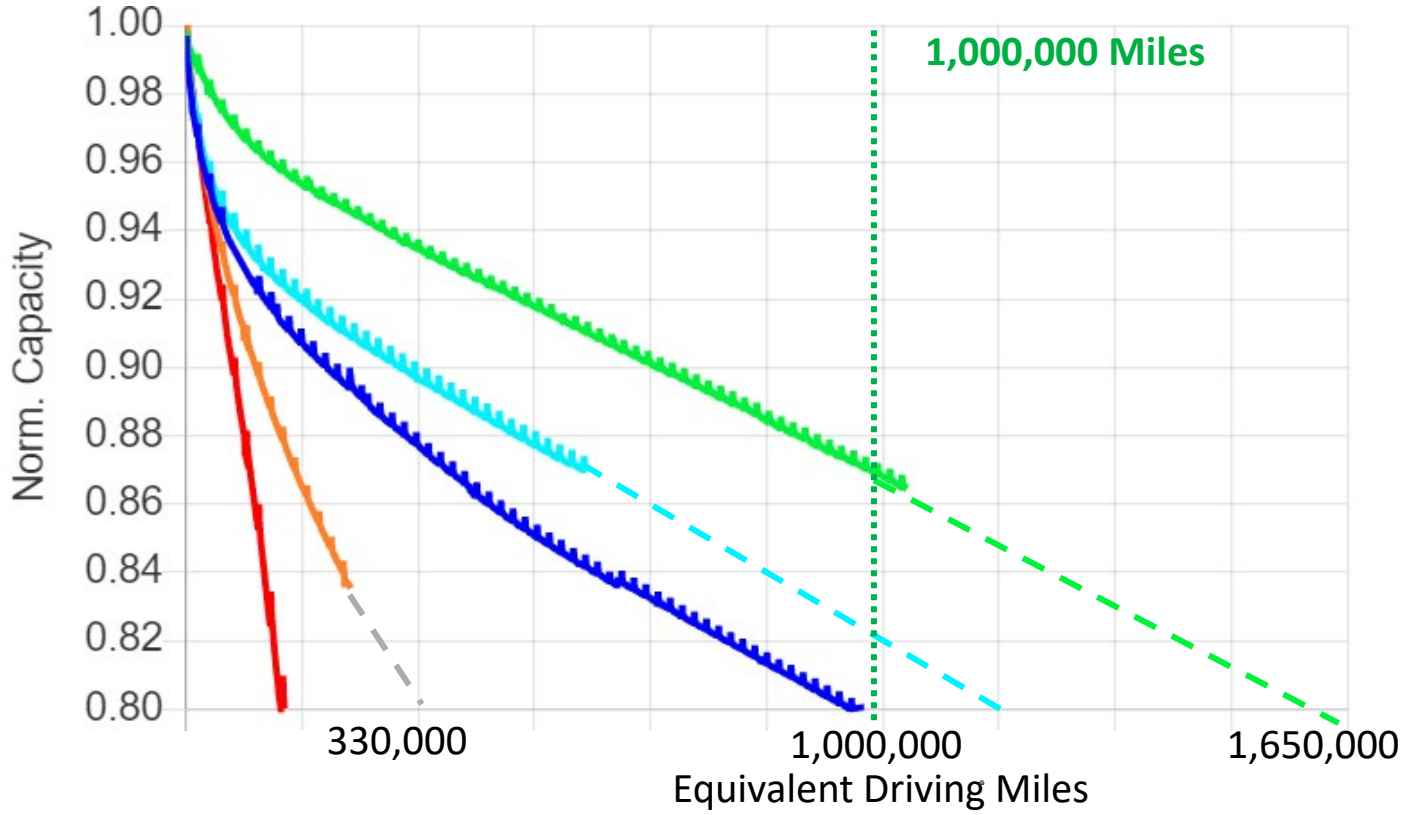
Customer Commitments Support NOVONIX North American Growth Plan



1. Market share based off implied North American graphite demand in 2030. Based on announced capacity. Assumes full utilization. Source: Benchmark Mineral Intelligence Gigafactory Assessment – December 2023.
2. Company expectations aligned with customer contracts and anticipated customer demand, which may or may not materialize.
3. KORE Power agreement to supply Koreplex anticipates a ~3K tpa delivery ramping to ~12K tpa rate. Panasonic Energy (PENA) agreement calls for 10,000 tonnes over four years.
4. Assumes 55kg of graphite per EV.

NOVONIX's Battery Technology Paves the Way for the Next Generation

Demonstrated and Projected Performance Predicted to Exceed 1 Million Miles based on ~2 Years of Test Data[1]

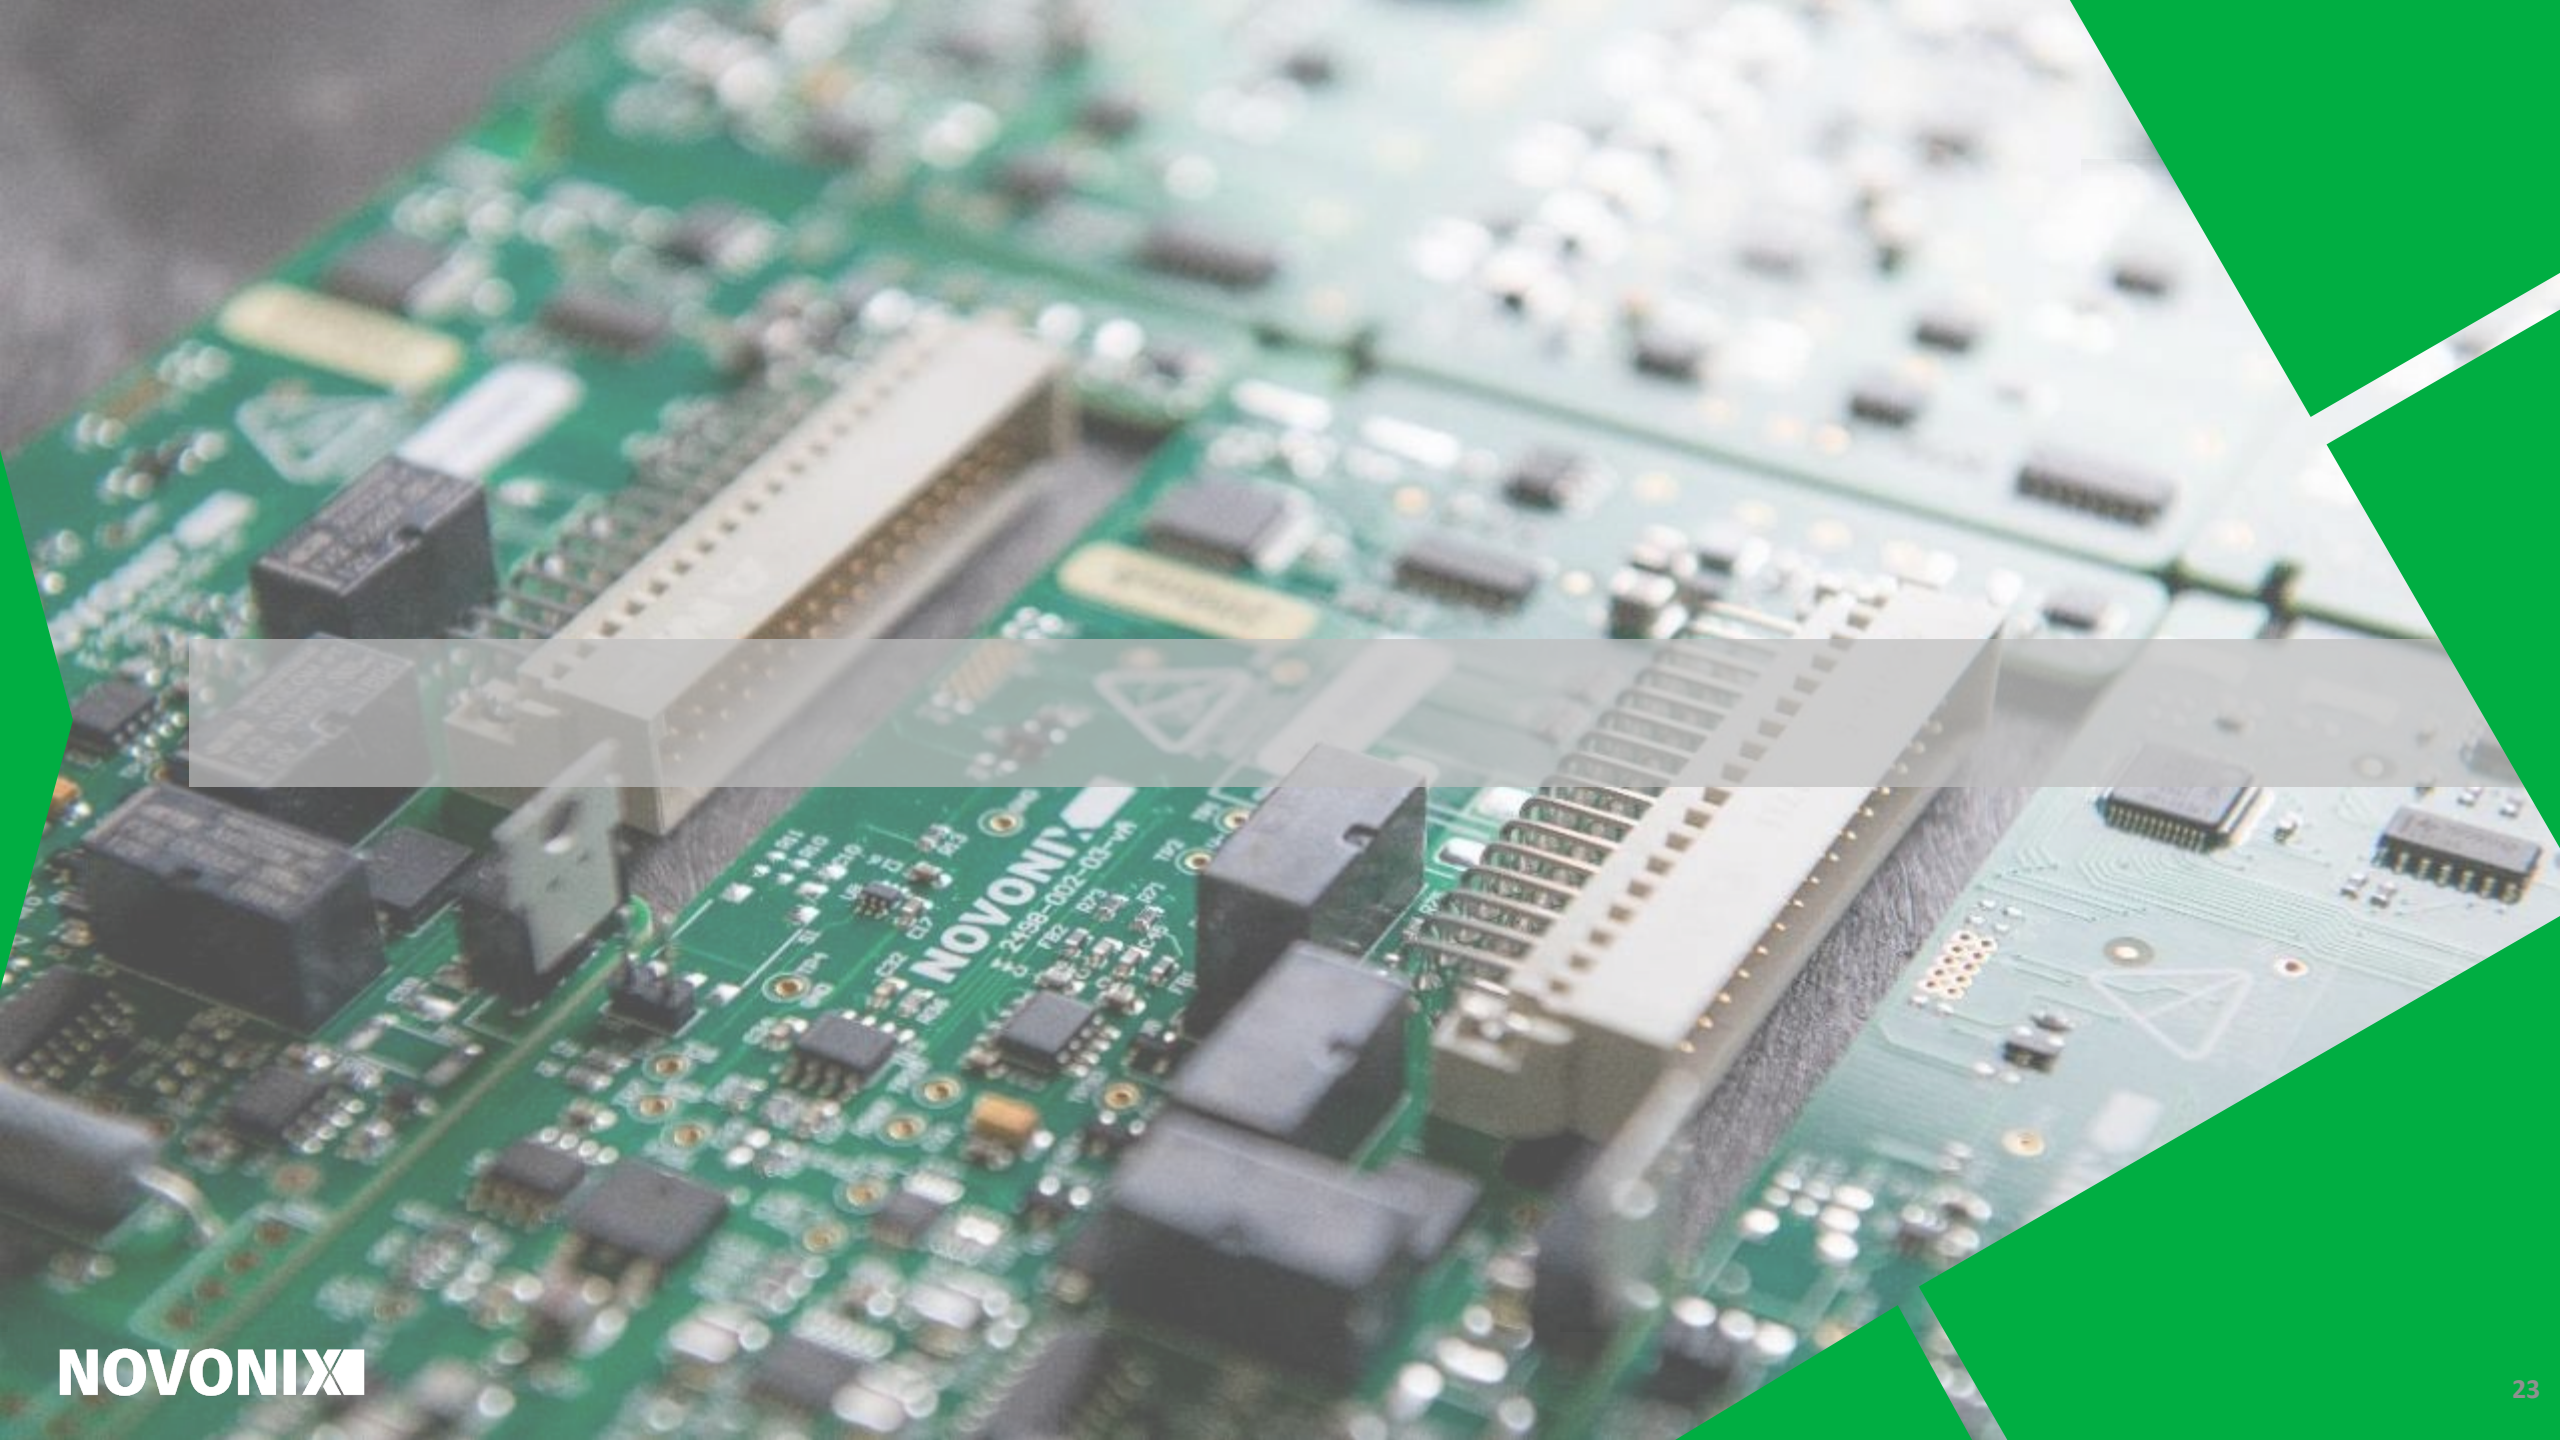


- PC622/Synthetic Graphite
- SC622/Natural Graphite
- SC622/Synthetic Graphite
- SC622/Synthetic Graphite + NOVONIX Advanced Electrolyte
- SC622/NOVONIX Anode Material + Advanced Electrolyte

Building full cells for performance testing to demonstrate performance of NOVONIX anode, cathode, and electrolyte technologies in a single cell

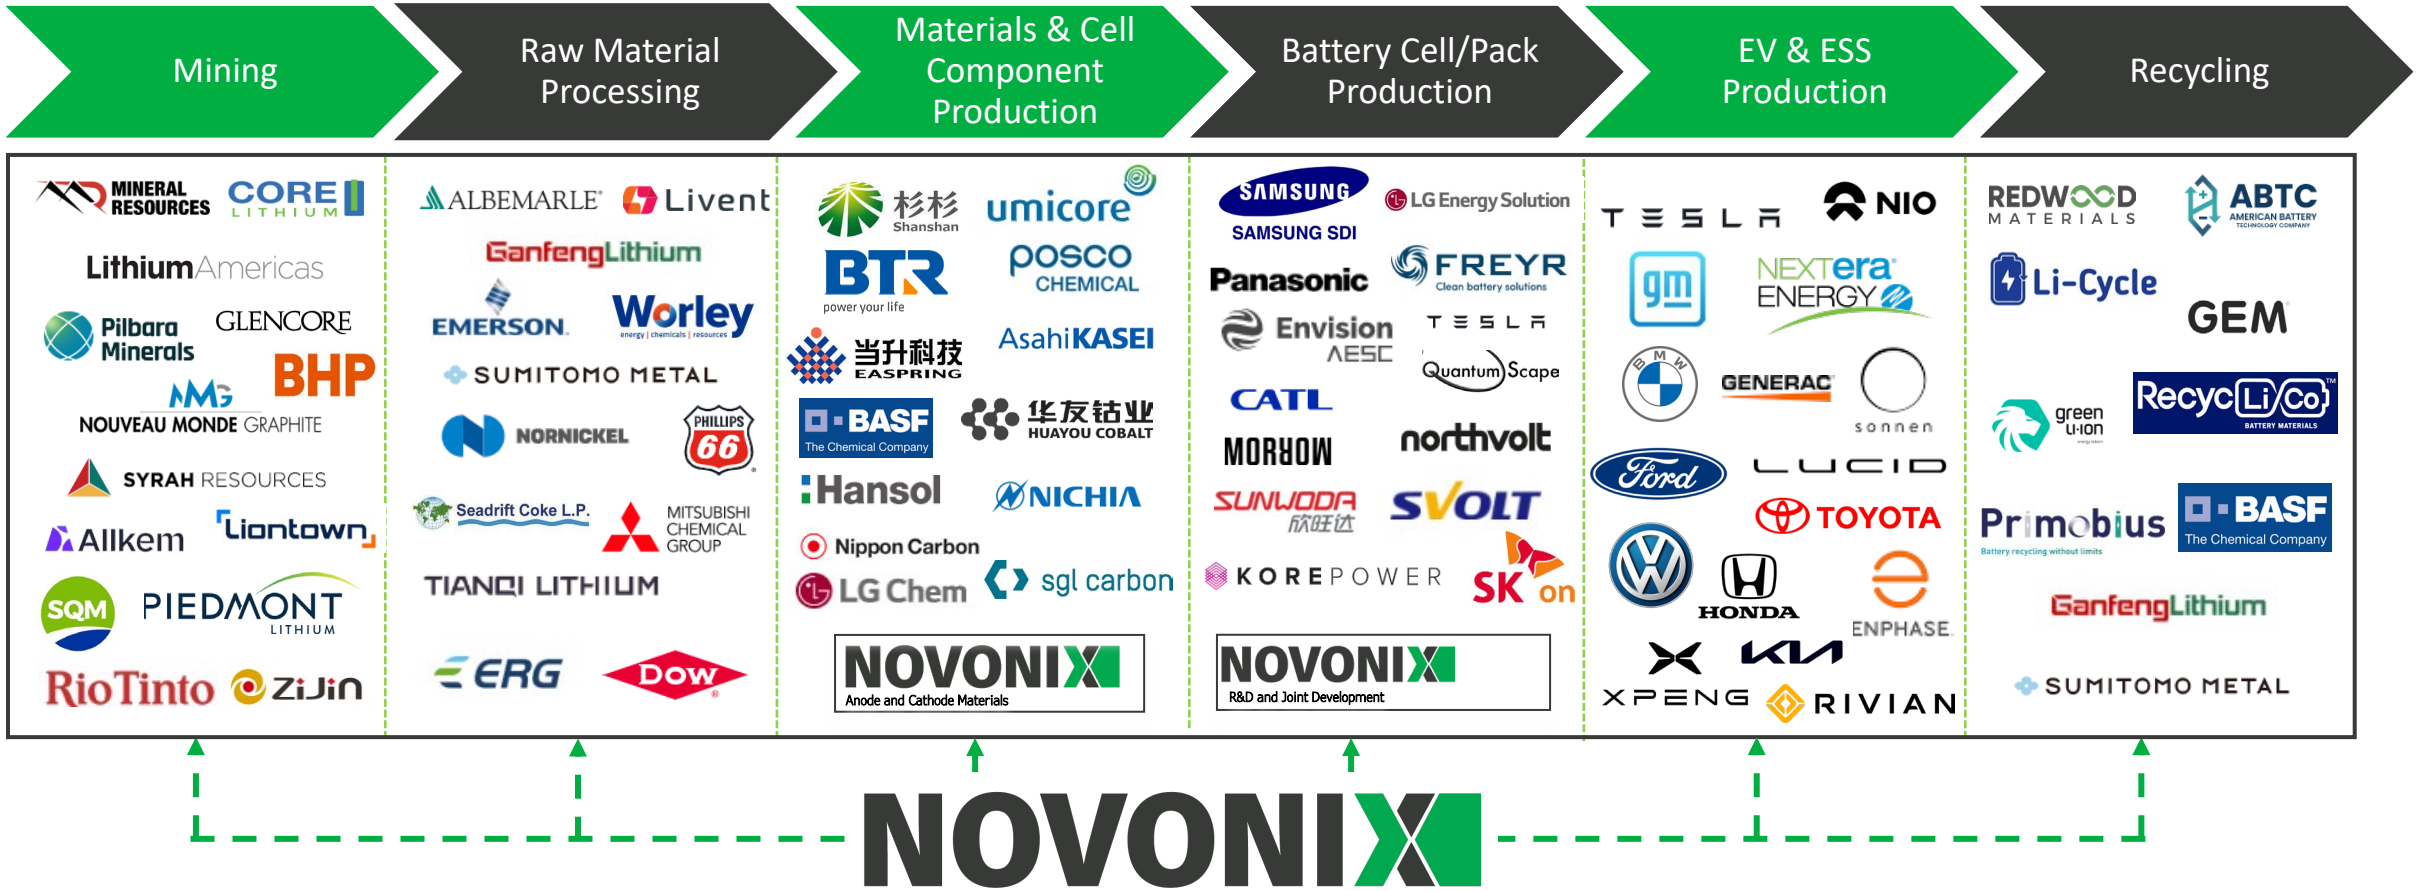
1. Data based on internal measurements taken as part of verification process. 40°C full depth of discharge cycling, Assumed 330-mile range. Projection lines shown for guidance. SC NCM622 shown here is Commercial SCC reference material.

Goals for the Future of NOVONIX



NOVONIX

NOVONIX Plays a Critical Role in the Lithium-Ion Battery Value Chain



Visibility across the entire battery value chain provides competitive intelligence and attractive opportunities for NOVONIX

Note: Companies presented above are for indicative purposes only and not a representation of customer relationships.

NOVONIX has Optimized Synthetic Graphite Manufacturing and Attracted Tier-1 Partnerships

Strategic Partnerships Supporting Product and Process R&D

- Partnership with Harper International, a domestic specialized furnace technology leader, developing and supplying NVX with proprietary systems for thermal processing
- Signed a Joint Research and Development Agreement (JDA) with LGES in June 2023
- Engaged with PSX in technology development agreement to collaborate on optimization of feedstock ad anode processing with the goal of higher performance lower carbon intensity materials

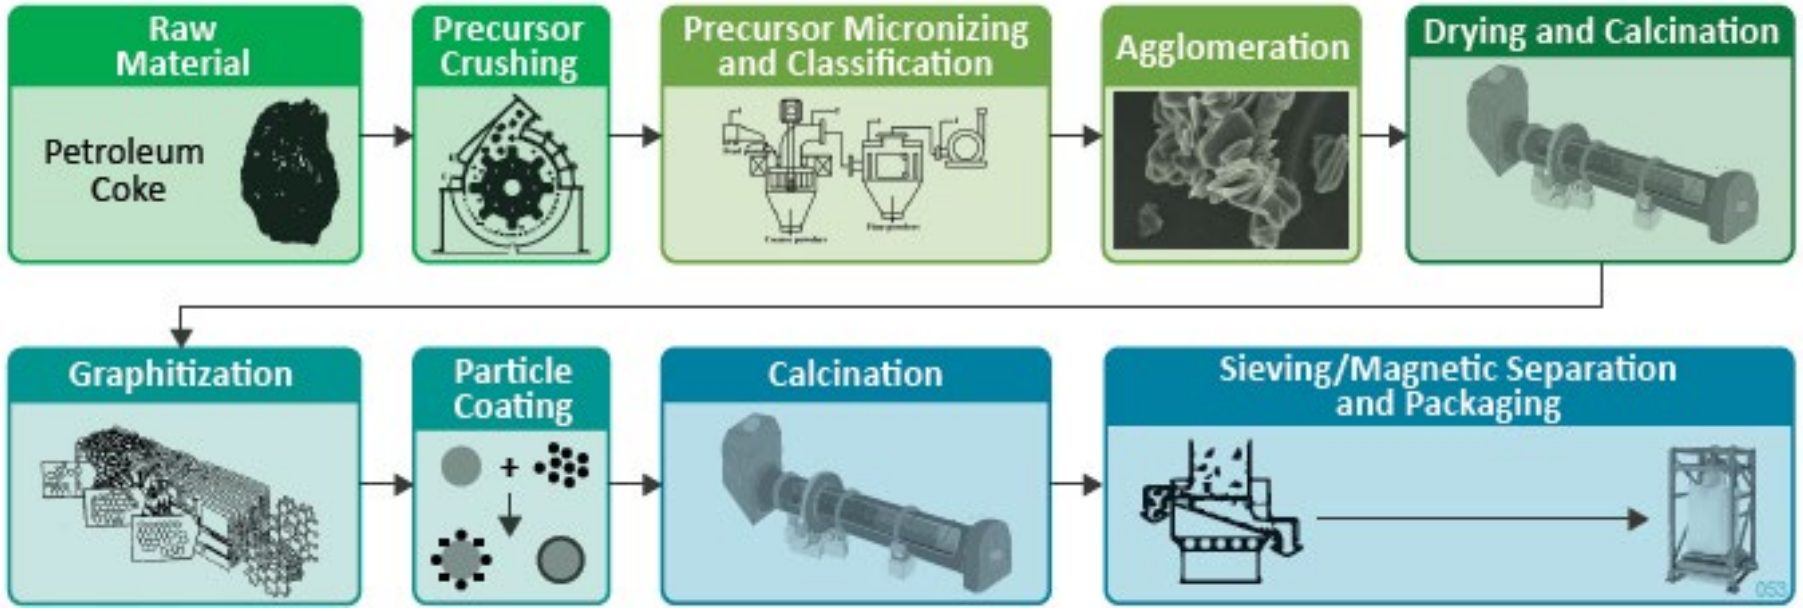
PHILLIPS 66

LG Energy Solution

Harper International

NOVONIX Graphitization Process Offers End-User Advantages

- Energy efficient systems reducing environmental permitting requirements
- Integrated and strong collaboration with precursor material and equipment providers
- Customizable processing equipment to match various customer requirements



Incumbent technology standard process

U.S. Legislation Providing Direct Support to NOVONIX's Business Plan

Section 301 Tariffs

- In August 2017, the Office of the United States Trade Representative (USTR) launched an investigation into China's allegedly unreasonable and discriminatory trade practices under Section 301 of the Trade Act of 1974. The tariff exclusion "necessity review" was extended to December 2023
- **Section 301 includes a 25% tariff on artificial graphite imported from China** to help remove unfair market distortions imposed by China's anticompetitive behaviors and size advantage in the battery materials sector

IRA Tax Credits & Consumer Credit

- **Inflation Reduction Act of 2022 ("IRA") includes an estimated $369 billion in investments** related to "climate change and energy security," including tax and other incentives to promote U.S. production of electric vehicles ("EVs"), renewable energy technologies, and critical minerals, representing the single biggest climate investment in U.S. history. IRA includes a **$7,500 federal consumer tax credit for qualifying electric vehicles, starting in 2023 based on the origin of materials and localization of manufacturing**
  - **$3,750 of the credit must meet critical minerals requirement**
  - **$3,750 from battery components must meet be manufactured or assembled in North America** or Countries with a FTA
- New production and "advanced manufacturing" tax credits
  - **Section 45X provides a 10% tax credit** which is available to producers of electrode active materials (measured as a percentage of total cost of production).
  - **Expands section 48C to provide $10 billion in tax credits**. The tax credit is 30 percent of the amount invested in new or upgraded factories to build specified renewable energy components.

DOE MESC Grant & DOE LPO Loan

- **NOVONIX finalized US$100 million of grant funding** by the Department of Energy (DOE) Office of Manufacturing and Energy Supply Chains (MESC) to expand NAM's domestic production of high-performance, synthetic graphite anode materials – one of 21 winners across 12 categories
- **NOVONIX has applied for a loan though DOE LPO**. The loan, if received, would contribute toward funding the company's current expansion of battery materials capacity

NOVONIX Finalizes US$100 Million Grant Award from U.S. Department of Energy

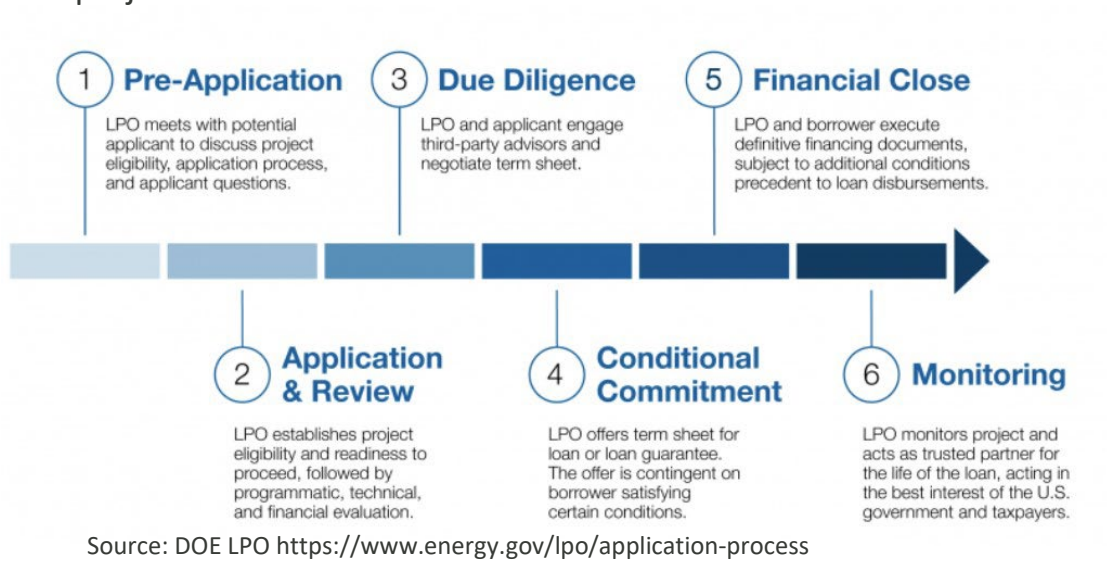
DOE MESC Grant Aids Ability to Scale Faster

- NOVONIX Anode Materials division was awarded one of the initial grants from the U.S. Department of Energy for US$100 million
- Grant award was funded through President Biden's Bipartisan Infrastructure Law (BIL) which aims to strengthen the North American battery supply chain
  - Recent Chinese export controls on graphite highlight the importance of US based suppliers such as NOVONIX
- Funding underpins doubling of production capacity to 20,000 tpa at existing Riverside (Chattanooga) facility and will be overseen by DOE MESC

MESC
OFFICE OF MANUFACTURING AND ENERGY SUPPLY CHAINS

DOE LPO Loan Process

- NOVONIX Anode Materials division has applied for a ATVM loan in October 2022 from the U.S. Department of Energy LPO office for a Greenfield location
- The loan may fund up to 80% of the value of the eligible project costs
- Debt priced at U.S. Treasury rates for the applicable term of the loan
- Construction financing and long loan tenors
- DOE is a reliable anchor lender actively engaged throughout the project life



Source: DOE LPO https://www.energy.gov/lpo/application-process

Strategic Relationship with KORE Power

Highlights of Agreements

- KORE Power is a leading U.S. based developer of battery cell technology for clean energy industries
- NOVONIX and KORE Power have worked together since 2019 through NOVONIX's BTS division to improve and validate KORE's battery technology
- KORE announced on 29 July 2021 the intention to build KOREPlex, a one million square foot manufacturing that will support up to 12 GWh of battery cell production in Buckeye, AZ
- KOREPlex scheduled to begin production in 2024
- Through the signed Supply Agreement, NOVONIX will be the exclusive supplier of graphite anode material to KOREPlex which, when in full production, will be close to 12,000 tonnes per year of material
- NOVONIX invested $25M USD to acquire a roughly 5% stake in KORE Power

NOVONIX Establishes Strategic Relationship with LG Energy Solution

LG Energy Solution (LGES) Overview

LGES has 7 plants in North America built or planned for completion in 2025

- LGES is a leading U.S. based developer of battery cell technology for EV and ESS Batteries
- LGES has developed relationships with GM, Honda, Hyundai and Stellantis in North America to supply EV batteries
- LGES plans for 8 plants with ~338 GWh of gigafactories in North America

Highlights of JDA & Investment Agreements

- NOVONIX and LGES signed a Joint Research and Development Agreement (JDA) in June 2023
- Upon successful completion of JDA, LGES has the option to purchase up to 50,000 tons of artificial graphite anode material over a 10-year period from the start of mass production in a separate supply agreement
- LGES invested US$30M in convertible notes issued by NOVONIX
